- Distinguished authorship. Olivier Blanchard is one of Pearson's most notable economics authors and brings his years of experience and research of macroeconomic issues, including his time as the chief economist at the International Monetary Fund, to the text.
- End-of-chapter sections, consisting of a chapter summary, list of key terms, exercises, and list of symbols, ensure the material in the chapter has been digested.
- Short, flexible chapters provide plenty of opportunity for alternative course organisation. A flowchart also makes it easy to see how the chapters are organised and fit within the book's overall structure.

- Material is organised around 2 parts: the core (chapters 3–13), which focus on the short-, medium-, and long-run markets; and a set of 2 major extensions (chapters 14–20), which provide more detailed examination of the issues at hand. An intro to macroeconomics precedes the core (chapters 1–2), while the extensions are followed by a review of the role of policy (chapters 21–23).
