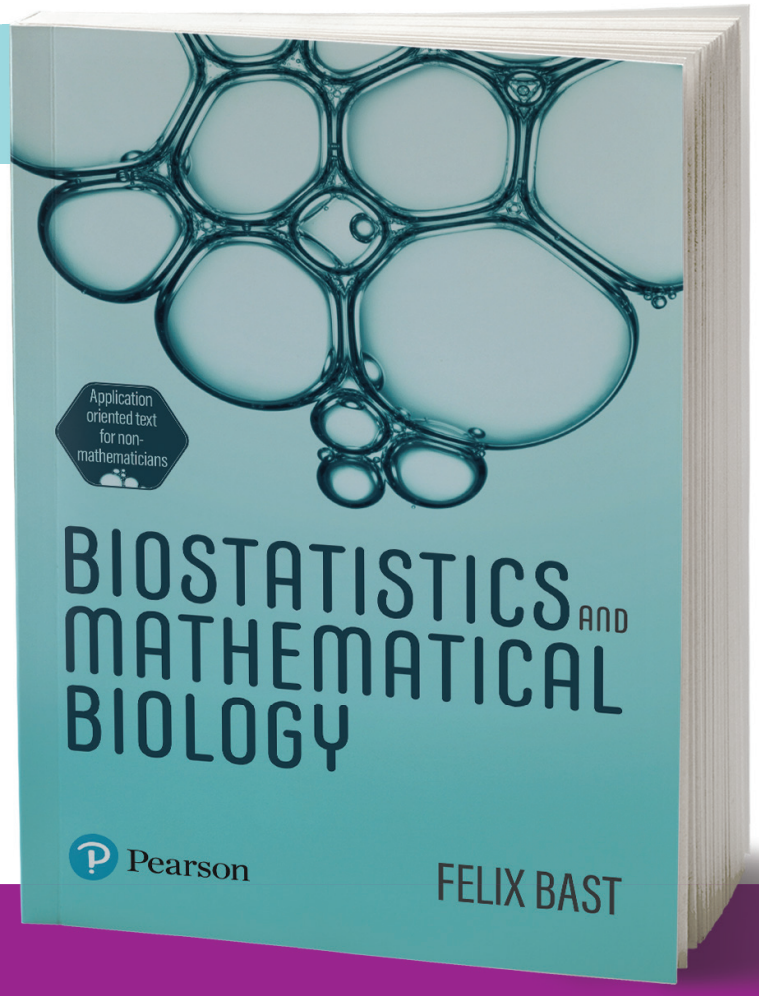
Pearson

#PrepareWell for Biostatistics by the numbers.

MRP
₹550



Why choose ***this book?***

- Fundamental concepts of statistics explained
- Focused on choosing the correct statistical test
- Non-mathematical approach
- Clear-cut recommendations for statistical tests and variations

Authored by:

Dr. Felix Bast, award-winning Indian Science Communicator and a public educator who's also:

- Professor at the Central University of Punjab, India
- Expert panelist of Paris-based International Science Council
- Elected fellow of Linnean Society of London
- Member of IUCN, Geneva
- Holds a Ph.D. in Marine Biology from MEXT, Japan (alumnus of Monbukagakusho: MEXT Japanese Govt. international doctoral fellowship)
- Served as expedition scientist in the Indian Antarctic Mission

Pearson

Table of Contents

Chapter 1: Introduction to Biostatistics and Mathematical Biology

Chapter 2: Types of Studies

Chapter 3: Levels of Measurements

Chapter 4: Summarizing Data: Tabular Presentation

Chapter 5: Summarizing Data: Graphical Presentation

Chapter 6: Charting with Excel

Chapter 7: Descriptive Statistics: Point Estimates

Chapter 8: Descriptive Statistics: Interval Estimates

Chapter 9: Error Bars

Chapter 10: Moments, Normality Tests and Outliers

Chapter 11: Concepts of Population, Sample and Confidence Intervals

Chapter 12: Statistical Hypothesis Testing

Chapter 13: Statistical Significance and P-Values

Chapter 14: Relationship between Confidence Intervals and Statistical Significance

Chapter 15: Statistical Power and Choosing the Right Sample Size

Chapter 16: t-distribution and Tests of Significance Based on t-distribution

Chapter 17: F-distribution and Tests of Significance Based on the F-distribution

Chapter 18: Post-Hoc Tests

Chapter 19: χ2-distribution and Tests of Significance Based on χ2-distribution

Chapter 20: Comparing Proportions

Chapter 21: Gaussian, Lognormal, Binomial and Poisson Distributions

Chapter 22: Pearson's Correlation

Chapter 23: Simple Linear Regression

Chapter 24: Non-linear Regression, Multiple Regression, and Logistic Regression

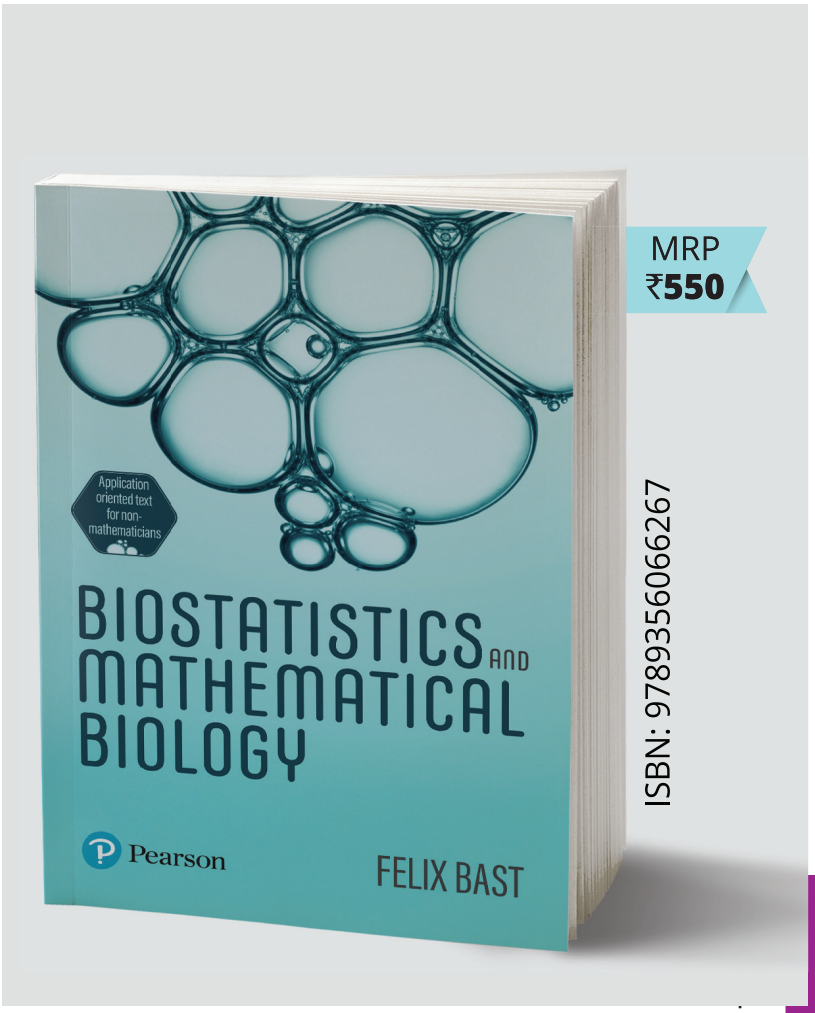
Chapter 25: Non-parametric Tests

Chapter 26: Permutations and Combinations

Chapter 27: Probability

Chapter 28: Likelihood and Bayes' Theorem

Chapter 29: Key Concepts of Statistics and Statistical Pitfalls to Avoid



What's Special

Biostatistics and Mathematical Biology is a comprehensive textbook targeted at non-mathematicians at an advanced bachelor level or above. The book sequentially covers basic mathematics topics essential for biologists and explores more advanced concepts, thereby complying with the biostatistics syllabus of various universities as well as competitive examinations.
